

Andrea Marranca

MSc Student in Computer Engineering — Artificial Intelligence and Data Analytics

Turin, Italy · andreamarranca@gmail.com · linkedin.com/in/andrea-marranca · github.com/Andrymar02 · andrymar02.github.io

PROFILE

MSc student in Computer Engineering at Politecnico di Torino, specialising in Artificial Intelligence and Data Analytics. I have built my experience through projects spanning the full stack: from C and assembly on ARM microcontrollers to full-stack web applications in React and Node. I am looking for an internship or a first role in AI applied to data, and in building software that integrates AI models.

EDUCATION

MSc in Computer Engineering — AI and Data Analytics

2025 – present

Politecnico di Torino — multilingual programme (Italian and English)

Main areas: machine learning, data management and analysis, computer architecture, full-stack web development.

BSc in Computer Engineering

2021 – 2024

University of Palermo — final grade 97/110, completed within the standard duration

Technical Diploma in Computer Science

2016 – 2021

Istituto Tecnico Industriale Ettore Majorana, Palermo — final grade 100/100

Programming in C, C++ and Java, systems administration, databases and statistics.

PROJECTS

Full source code and documentation at github.com/Andrymar02. Selected projects:

Tetris on LandTiger board — C, Assembly, ARM Cortex-M

2026

- Complete game developed bare-metal on an LPC1768 microcontroller, with no operating system.
- Interrupt-driven joystick and button input, hardware timers for piece descent, direct rendering to an LCD display.

BotPalestra — Python, Telegram Bot API

2025

- Bot that automatically books my gym training slot the moment reservations open, at midnight.
- Built to solve a personal problem and in daily use: schedule handling, service authentication and confirmation notifications.

Ultima Corsa — React, Node.js, Express, SQLite

2026

- Full-stack web application built as the final exam project for Web Applications I.
- Client-server architecture with REST APIs, authentication, session management and relational database persistence.

BIT-Tycoon — JavaScript, HTML, CSS, SVG

2026

- Self-taught management game, playable directly in the browser with no installation.
- Game logic, state handling and graphics built without external frameworks.

Other projects

2024 – 2026

- Three full-stack web apps in React and Express (turn-based games with server-side logic, scoring and match history).
- Android application in Kotlin for university canteen management, and a project template for the LandTiger board with preconfigured drivers and peripherals.

TECHNICAL SKILLS

Languages: C, C++, Java, Python, JavaScript, Kotlin, SQL, Assembly (ARM, RISC-V)

Web: React, Node.js, Express, HTML, CSS, Vite, SQLite

Embedded: ARM Cortex-M, bare-metal programming, Keil µVision

Mobile: Android (Kotlin)

Tools: Git, GitHub, Linux, Bash

LANGUAGES AND ADDITIONAL INFORMATION

Italian: native speaker

English: B2 — IELTS certified

Other languages: Spanish — good comprehension, basic speaking; French — basic comprehension

Driving licences: A2 and B, own vehicle · Open to relocation within Italy and abroad
